

EnviroManage's forestry module is an integrated Forest Carbon Management System, providing assurance to forest managers, advisors and auditors for forest related carbon certification projects.

CO₂Forest Features

Standards Based	Capture forest carbon data using your choice of carbon accounting standard: NZ ETS, ISO14064-2, VCS or more...
Documentation Management	Generate project description documentation and other standard compliant reports on-demand and version controlled.
Integrated Mapping	Integrated project descriptions with your existing shape files or use the web-based GIS system for defining and managing your areas.
Carbon Calculation	Quick and reliable carbon forest calculations using either pre-loaded look-up tables or formulas.
Data Security	Your data is kept safe and secure on our off-site backed-up database. Access is a closely monitored and limited by role based authorisation.

Free Demonstration

EnviroManage is an innovative web-based environmental compliance system for any carbon forest standard. Contact us for a free demonstration today. We look forward to hearing from you.
